Capital Markets

Calendar 2011 S&P 500 index performance understates the degree of volatility in markets during the year, a year in which equities generally performed poorly and Investment Grade Fixed Income performed well. In the US, resilient corporate performance outweighed concerns about a slowing economy and seemingly dysfunctional political climate.

Calendar Year 2011

Source: Ibbotson Associates

Concerns about Europe dominated global market performance during the second half of the year, as investors reacted daily to news regarding the progress (or lack thereof) regarding resolution to the sovereign debt crisis of eurozone countries. Additionally, Emerging Markets quietly under-performed as investors weighed the outcome of the eurozone crisis and problematic inflation. All told, International Equity markets, denoted by the MSCI AC World ex-US Index, lost 13.3% for the year.

For the year, the Barclays Aggregate Index posted a positive 7.8% return. Investors gravitated towards "Risk Free" assets, bidding up nominal and inflation – adjusted Treasuries and selling risk assets. Investment Grade Fixed Income generally performed well on an absolute basis in 2011.

The graph below breaks out calendar – quarter performance for equities and fixed income in 2011. It's interesting to observe that equities, while flat to negative in 2011, posted positive returns in the 1st, 2nd, and 4th, quarters, highlighting the negative impact of macro uncertainty on equity performance.

Source: Ibbotson Associates

U.S. Equity Markets

Despite significant volatility, the S&P 500 produced a 2.1% Total Return in 2011 as the Index finished the year at 1257.6, almost exactly where it began the year. Following a significant drawdown in the 3rd quarter, the S&P rallied by 10.9% in October, driving the majority of the 4th quarter's 11.8% return. Stocks rallied during the quarter amid signs that the trajectory of the US economy was improving. Additionally, S&P 500 corporate profits were resilient in 2011 despite significant global economic uncertainty. As of the time of this

writing, 20% of S&P companies have reported 4th quarter earnings. 2011 operating earnings estimates are expected to come in at approximately \$97 per share, representing a 16% increase year – over year. Though Q4 2011 consensus forecasted earnings have trended down during 2011, actual reported results have been mixed thus far during earnings season, as roughly 50% of the companies that have reported have beaten expectations.

Large stocks outperformed small stocks during the year. Growth stocks generally outperformed across market capitalizations.

International Equity Markets

MSCI Indexes: Calendar Year 2011

Source: MSCI

International stocks performed poorly on an absolute basis across both Developed and Emerging Markets regions. Though there were multiple causes for poor performance including a combination of default and recession concerns among Euro-Zone countries; tsunami, nuclear fallout and the impact of yen appreciation on exports in Japan; and concerns about the combination of inflation and the economic impact of slowing Developed Economy GDP growth on Emerging Markets led to poor performance. There was significant dispersion among country returns during the year, oftentimes within similar regions. Among European countries, Ireland (+14% in USD) significantly out – performed Greece (-63% in USD). Similarly, within EM Asia, Indonesia (+7% in USD) significantly out – performed India (-37%). USD relative performance was mixed during year, most notably depreciating relative to the Yen and appreciating relative to EM currencies.

**MSCI Indexes: Calendar Year 2011
(Returns in US Dollars)**

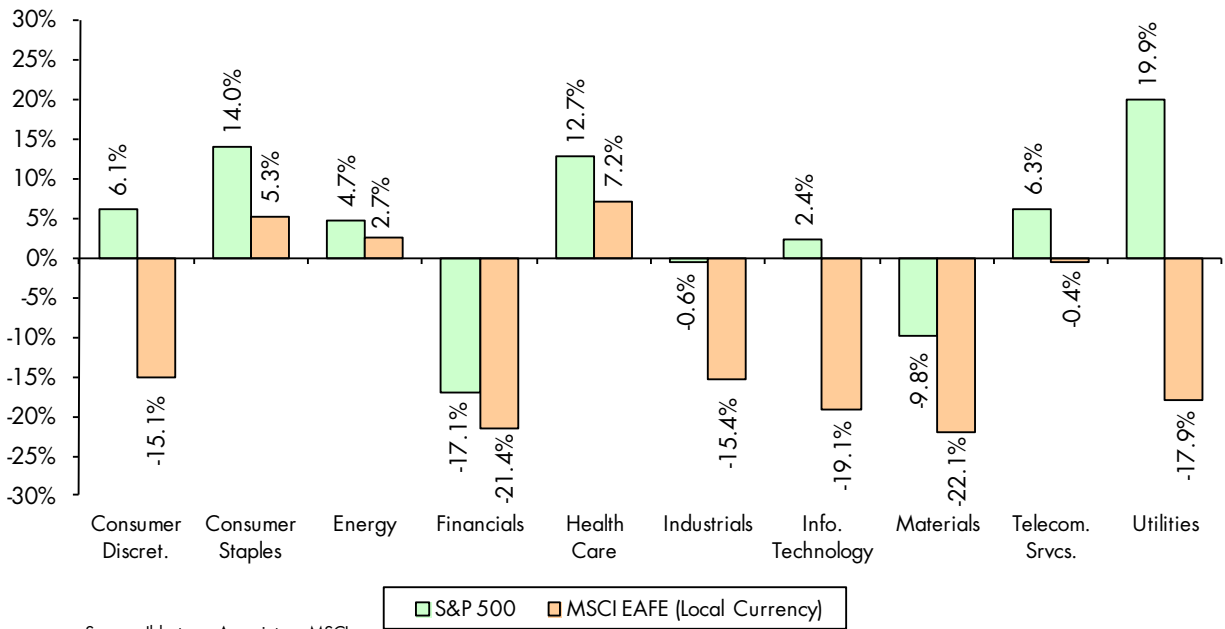

Source: MSCI

There was very little performance dispersion among EAFE constituents across Size and Style metrics.

Equity Sectors

Sector Performance: Calendar Year 2011

Within the US, traditionally defensive sectors out - performed during 2011. This is most evident visually by noting the performance Consumer Staples, Health Care, Telecommunications and Utilities sectors. Though not detailed in the graph above, defensive companies (as denoted in the Russell 3000 Defensive Index) significantly out-performed their cyclical (denoted by the Russell 3000 Dynamic Index) counterparts by 15.2%, appreciating by 8.6% in 2011. Earnings growth was generally positive for S&P 500 sectors. Energy posted the strongest EPS growth during 2011, rising by 40% and pushing the Energy Index higher.

It is evident in the graph above that EAFE sectors under – performed their S&P 500 counterparts in 2011. A more negative economic backdrop for EAFE companies dragged down performance. A lack of policy direction among European leaders has increased the prospect of both recession in the eurozone with the potential for systemic losses in the case of European Sovereign default. This concern is most evident in the performance of Financials in the S&P 500 and MSCI EAFE Index.

Financials globally were among the worst performers as investors worked to understand the degree of bank balance sheet exposure to eurozone sovereign debt and the impact of some combination of disorderly default and slowing European economic growth.

Fixed Income Markets

Despite low absolute yields at the beginning of the year and a rating downgrade to US Sovereign Credit, Treasury yields fell significantly in 2011. Risk aversion drove performance during the year, as investors fled risky assets and invested in Treasuries as a safe haven during the year, particularly in the 3rd quarter. The Barclays Aggregate Index returned 7.8% during the year, including 4.3% capital appreciation from falling rates.

Perceived safety and liquidity were the dominant drivers of performance in 2011. Nominal and Inflation – Adjusted Treasuries were the strongest performing sectors during the year. Long duration Treasuries performed very strongly in 2011, returning 29.9% during the year. TIPs were also strong performers, achieving a total return of 13.6%.

Despite generally positive performance on an absolute basis, spread sectors under – performed Treasuries during the year. Corporate Credit performed well on an absolute basis, supported by strong fundamentals and a robust issuance environment. Investment grade Corporate fixed income (+8.1%) out – performed High Yield Corporate Credit (+5%). High quality Securitized sectors, including Agency RMBS, CMBS and ABS, also performed well during the year, all earning mid – digit absolute returns.

Real Estate Markets

Private commercial real estate, measured by the NCREIF Property Index (National Council of Real Estate Investment Fiduciaries) followed a strong 2010 13.1% return with an even stronger 14.3% result in 2011. The income return has solid at 6.1% while appreciation in property values continued to improve with a 7.8% gain in the year.

The Apartment sector led other property types benefiting from the struggling single housing markets and positive demographics. All property types produced double digit returns, reflective of the uptick in the business cycle during the current, albeit weak, economic expansion.

**NCREIF Property Index Returns:
Calendar Year 2011**

Returns are preliminary. Source: NCREIF

Bi-coastal properties provided higher returns than the Midwest and South regions as economies are improving both in the west and east. Core property values are no longer cheap and continued appreciation improvements are dependent on job growth and may lessen if the economy stalls.

Hedge Fund Strategies

Hedge Fund Research Index Returns: 4th Quarter 2011 & Calendar YTD 2011

Returns are preliminary. Source: Hedge Fund Research

2011 was a difficult year for hedged managers across all strategies highlighted above. Active management in 2011 was generally not rewarded as managers were challenged navigating high security correlations during a choppy, "Risk On, Risk Off" market environment. Hedge Funds of Funds, vehicles that allocate to managers across various sub-strategies (including those highlighted in the graph above) posted disappointing returns, with the Hedge Fund Research Fund of Funds Composite Index losing 5.6% of value.

Though equities and credit rallied dramatically in the 4th quarter, hedge fund strategies lagged as managers took down risk to mitigate losses in the 3rd quarter. High stock correlations and significant market volatility posed a challenge for equity managers in 2011, particularly with respect to managing risk. Managers with more of a defensive orientation tended to perform better in 2011. In total, Equity Hedge as a strategy was the worst performer of the subs – strategies above, losing 8.3% in 2011.

Macro, including CTA trend following strategies, also experienced challenging performance in 2011. Though these strategies tend to perform well during periods of market stress, a lack of discernible market trends led to poor absolute performance. Of sub – strategies that were profitable, "Risk Off" trades, including long USD and long interest rates, were positive in 2011.

Less market directional strategies, including Event Driven and Relative Value, fared better in 2011. Of all indices above, Relative Value was the strategy that earned positive 2011 performance. . Anecdotal, managers appeared to be particularly focused on non – Agency RMBS markets. Though several of the RMBS indices performed poorly, hedged strategies appear to have performed well on an absolute basis.
